SUMMARY

I build AI features that ship — agentic RAG systems, tool-calling agents, and LLM evaluation — on Python back ends and front ends people use. I own a feature end to end, from the API and retrieval underneath to the screen on top, and I keep it working in production with tests, tracing, and human review.

TECHNICAL SKILLS

AI / LLMs: LLMs, generative AI, Retrieval-Augmented Generation (RAG), Graph-RAG, agentic AI, AI agents, multi-agent systems, agent orchestration, tool/function calling, Model Context Protocol (MCP), prompt engineering, context engineering, structured outputs, embeddings, semantic search, fine-tuning, retrieval evaluation, guardrails

AI frameworks & evaluation: LangChain, LangGraph, LangSmith, DeepEval, LlamaIndex, CrewAI, Hugging Face Transformers, PyTorch, Claude Code, Cursor, OpenAI / Anthropic APIs, LLM-as-judge evaluation, human-in-the-loop review, tracing, observability

Languages & backend: Python (FastAPI, Django, Flask), Java (Spring Boot), Node.js, TypeScript, SQL, REST APIs, GraphQL, Pydantic, SQLAlchemy, Celery, WebSockets, async and streaming services, authentication, caching, background jobs

Frontend: React, Next.js, TypeScript, JavaScript, Tailwind CSS, HTML, CSS, state management, API integration, responsive design

Data, cloud & DevOps: PostgreSQL, MySQL, MongoDB, Redis, Pinecone, FAISS, pgvector, ChromaDB, vector databases, data pipelines, Pandas, NumPy, scikit-learn, AWS (EC2, S3, Lambda, RDS), Docker, Kubernetes, Terraform, GitHub Actions, Jenkins, Linux, CI/CD, Git

Testing & monitoring: PyTest, JUnit, Jest, Playwright, Postman, OpenAPI, integration testing, Prometheus, CloudWatch, OpenTelemetry

EXPERIENCE

Meta | Software Engineer Aug 2026 – Present
Remote · Focus: LLM evaluation · Python, FastAPI, REST APIs, PyTest, CI/CD, human-in-the-loop

- I look after LLM evaluation and human-review workflows — the checks before a model change goes out. I made the setup more reliable and cut failed runs by 30% across 200+ checks a week.
- I built FastAPI services and REST APIs, plugging those workflows into internal data and systems, used by 4 teams, with 120+ PyTest checks in CI/CD.
- I cleaned up data and evaluation pipelines with engineers and tracked down why scores moved — prompt, retrieval, or model — turning vague "it got worse" reports into real fixes.
- I added guardrails and human-review steps to the workflows, so risky model outputs got checked before they reached users, and I wrote up the checks so other teams could reuse them.

micro1 | Artificial Intelligence Engineer May 2025 – Jul 2026
Remote · Focus: LangChain agents · LangGraph, LangSmith, DeepEval, RAG, tool calling

- I built LangChain agents and RAG search over 10,000+ documents, so answers came with real context instead of guesses. Accuracy rose from 72% to 86% in DeepEval checks.
- I shipped them into production, forward-deployed style — working directly with the teams using them and fixing tool calls as they got stuck — from demo to daily use at 500+ requests a day.
- I wired the agents into backend APIs and traced failures in LangSmith, pinning wrong answers to retrieval, prompting, or the model. Tighter retrieval and caching cut response time from 4.2 to 2.1 seconds.
- I refined prompts and tool definitions from the failures I traced, and I kept the agents' answers grounded in retrieved documents so they did not invent details.

ColomboAI | Agentic Engineer Jan 2026 – Mar 2026
Focus: Agentic RAG · LangGraph, vector search, embeddings, evaluation, prompt and tool refinement

- I compared RAG setups for operational work — different chunking, embeddings, and vector search — and kept the best on our test questions. Correct top answers rose from 68% to 84%.
- I built Python agents handling 300+ operational tasks a week, calling tools to finish work instead of just drafting replies, saving roughly 25 hours of manual work a week.
- I ran 50+ test runs, logged failures, and refined prompts and tool calls until task success rose from 78% to 91%, writing up what worked so the next person did not relearn it.
- I documented the RAG setups I compared and the prompt and tool changes that worked, so the next person could pick up the agents without re-running the same tests.

Zoron IT Solutions | Full Stack Engineer Jan 2022 – Jul 2023
India (On-site) · Focus: Python full-stack · FastAPI, Django, React, TypeScript, Next.js, Tailwind CSS, PostgreSQL, REST APIs

- I built features the whole way through — FastAPI/Django services, React/TypeScript pages, PostgreSQL and Redis underneath — owning the API, the screen, and the data model, with no handoff when something broke.
- I built React/Next.js pages with TypeScript and Tailwind CSS, including search over 25,000+ records, paging results and caching repeat queries, and fixing slow filters and unclear errors.
- I added RAG and Graph-RAG search over vector databases and knowledge graphs to the same apps, plus streaming services handling 1,000+ LLM requests a day. Relevance rose 35%; async jobs cut processing time 40%.
- I wrote PyTest checks for the APIs and data paths I built and kept them in CI/CD, so a change to the API, screen, or data model showed up as a failing test before it shipped.

PROJECTS

Melanoma Diagnosis from Dermoscopy Images SRM University · Published May 2023

- I trained a deep-learning CNN classifier in Python on 10,000 dermoscopy images, using data augmentation to stretch a small dataset, and reached 89% accuracy.

Customizing and Optimizing xv6 Operating System University of South Florida · 2025

- I added 3 system calls in C and reworked the scheduler, improving scheduler performance by 15% in my tests.

Abstraction and Reasoning Corpus (ARC) 2026

- I built a 400-task reasoning benchmark and scored 5 LLMs the same way, comparing abstract reasoning.

EDUCATION & CERTIFICATIONS

Master's Degree, University of South Florida · Bachelor's degree, SRM IST Chennai

Certifications: AWS Certified Machine Learning – Specialty · Oracle Generative AI Professional · Databricks Advanced Machine Learning Operations & Data Preparation for Machine Learning · Snowflake Platform Training – APAC
